PRODUCT UNIQUE FEATURES

- Acoustic Knit Top — A Keyboard That Belongs on a Premium Desk

Fabric-finished top panel with embedded LED matrix display. **The signature visual language of SUPER MAXFIT** — premium texture where every other keyboard shows plastic.
- LED Matrix Display · 7×33 Pixels with Live Clock

Built-in pixel display shows time by default, fully customizable via web driver — your desk gains a private information screen.
- Dual Smart Knobs · Volume + Mode

Large knob for volume, small knob for device/mode switching. High-frequency actions become physical and instant.
- KTT Misty Blue Linear · 43gf · 50M Lifespan

Light linear feel tuned for all-day typing and gaming. Misty blue / purple POM stems — even the switches look premium.
- 8000 mAh · Up to 200-Hour Battery

Largest battery in its class. Backlit gaming still lasts a full work week (40 hours); lights-off mode hits 200 hours.
- Gasket Mount + 4-Layer Sound Dampening

Plate foam + IXPE + TPR + bottom foam, paired with gasket-floating mount for that deep "thock" — quality you can hear.

HERO FEATURE

Acoustic Knit Top

The keyboard's most visible surface is no longer cold plastic — it's a fabric-and-display composite. SUPER MAXFIT's signature look.

DETAIL 01

Knit Fabric Surface

#DETAIL-01
Knit Top Macro

Speaker-grade knit fabric across the top — a tactile, premium finish.

DETAIL 02

LED Matrix Display

#DETAIL-02
Matrix Lit-Up

7×33 pixels embedded beneath the fabric. Live clock + custom pixel art.

SOFTWARE CONTROL

Customize Everything in One App

Web-based driver — no install required. Customize the matrix display, key mapping, and lighting modes from any browser.

#SW-01
Matrix Editor

Matrix Display Editor

Pre-loaded animations + pixel art editor — design your own frame-by-frame patterns.

#SW-02
Lighting Editor

Lighting & Keymap

19 ARGB modes, full key remapping, macro recording — all in one browser tab.

PAIN POINTS & SOLUTIONS

- 1

"Premium" keyboards still ship with cheap plastic tops — they ruin a thousand-dollar desk setup.

Solution: Acoustic knit fabric top — turns the most visible surface into a designed object that fits a premium desk.
- 2

Switching between MacBook, iPad, and phone wastes minutes on Bluetooth re-pairing every time.

Solution: Side mode-knob + BT 5.3 with 3-device memory — twist once, one-second context switching, no Fn combos.
- 3

Keycap legends fade after a year — your "premium" board ends up looking three years old.

Solution: PBT double-shot keycaps — legends molded through the cap, physically cannot fade. Arrow keys dye-sublimated in color.
- 4

Mid-meeting volume, mute, and time-check all require Fn combos or removing hands from keys.

Solution: Dual knobs + LED matrix clock — three high-frequency desktop actions become physical and visual.
- 5

Most wireless keyboards die in a day with RGB on — at that point, why bother going wireless?

Solution: 8000 mAh — largest battery in its class. 40 hrs backlit, 200 hrs lights-off. A spec number that sells.
- 6

Mechanical keyboards sound thin and hollow — cheap acoustics kill any premium feel.

Solution: Gasket mount + 4-layer dampening with KTT Misty Blue linear switches. Deep "thock" — quality you can hear.
