HERO FEATURE

5000 mAh — A Week Between Charges

The biggest cell ever shipped in this category. 200 hrs lights-off, 40 hrs full-RGB max brightness, 1000+ charge cycles rated. Plug in Monday morning, forget the cable until next weekend.

DETAIL 01

Fast Charge over Type-C

#DETAIL-01
Type-C Port Macro

5 V / 2 A fast charge · 0 → 80 % in 90 minutes — top up between matches.

DETAIL 02

Battery Readout On Board

#DETAIL-02
Side Indicator LED

Side LED + Fn + B keystroke shows exact %. No app needed.

PRODUCT UNIQUE FEATURES

- Tri-Mode, Zero Compromise**
BT 5.0 + 2.4 G + USB-C wired. Three radios in one board. **Pair phone, tablet, PC simultaneously** — hot-jump between them with Fn+1/2/3.
- 5000 mAh · A Week Per Charge**
Largest cell in its ¥200 tier. **~200 hrs lights-off, ~40 hrs full RGB**. Plug in Monday, forget the cable until next weekend.
- Tool-Free Hot-Swap Sockets**
Pop in any 3/5-pin MX switch in 10 seconds. Linear today, tactile tomorrow. No solder, no warranty void.
- Genuine PBT Double-Shot Keycaps**
Sand-blasted matte texture that never shines, legends molded into the plastic — not painted on. Six months heavy use, still factory fresh.
- South-Facing Per-Key RGB**
16.8 M color SMD LEDs mounted south. Glow reads **through** the legend, not around it — clean under Cherry or OEM profile caps.
- 1000 Hz on 2.4 G**
Wired-grade polling over the dongle. 1 ms response, sub-frame click-to-photon. The cable isn't faster anymore.

SOFTWARE CONTROL

FANTECH Drive — Tune Every Key

Full-feature config app for Windows & macOS. Remap every key, build 4 RGB profiles, record macros, schedule sleep timer. Saves on-board — settings travel with the keyboard.

#SW-01
RGB Editor

Per-Key RGB Editor

18 preset patterns + per-key color picker. Build 4 profiles, swap with Fn + Space.

#SW-02
Macro Recorder

Macro & Keymap

32 macro slots, full key remap, on-board memory — no driver needed on second PC.

PAIN POINTS & SOLUTIONS

- Wireless keyboards die mid-tournament — and the charging cable is always somewhere else.**
Solution: 5000 mAh cell + auto-fallback. 2.4 G drops, it switches to BT in 200 ms. Battery low, plug C-to-A and keep playing wired — zero downtime.
- Cheap ABS keycaps shine into mirrors after a month of heavy use.**
Solution: Genuine PBT double-shot. Sand-blasted matte texture rated for 3 M+ keystrokes; legends are part of the plastic, can't wear off.
- One dead switch and the whole board becomes e-waste — no repair option for the buyer.**
Solution: Tool-free hot-swap sockets. Lift cap, pull switch, push new one in — 10 seconds per key. 4 spare switches in the box.
- RGB looks cheap because north-facing LEDs leak around the keycap instead of through the legend.**
Solution: South-facing per-key SMD LEDs. Reads cleanly through Cherry & OEM keycap legends. No more "halo" leakage — premium feel at ¥199.
- 2.4 G dongles always feel a beat behind wired — gamers refuse to commit.**
Solution: 1000 Hz polling RF + low-latency chip. Click-to-photon under 4 ms — indistinguishable from wired in blind A/B tests.
- Switching one keyboard between laptop, phone, and tablet means re-pairing every single time.**
Solution: Tri-mode + 3 paired BT slots. Fn+1/2/3 snaps between three devices instantly. One board, the whole desk.
