

TEST-MOUSE-001

Wireless Gaming Mouse

SILENT SWITCH · 12K DPI · DUAL-MODE · 50HR BATTERY

APPLICATION SCENE

All-Night Quiet Gaming

HERO IMAGE

Lovart scene · pending (Phase 2)

PRODUCT UNIQUE FEATURES

- **Silent Micro-Switches — Gaming That Doesn't Wake the House**
Silicone-dampened micros, **sub-35 dB click**, rated **50 M cycles**. Same crisp curve as loud reds — one-quarter the volume.
- **12,000 DPI Optical Sensor**
Pixel-precise tracking on glass, cloth, hard pads. Zero lift-off acceleration. Same sensor tier most ¥200+ mice use.
- **Dual-Mode: BT 5.0 + 2.4 G**
Wired feel on the dongle, multi-device freedom on Bluetooth. Bottom-button switch jumps PC → laptop in 1 second.
- **1000 Hz Polling — Wired-Grade RF**
1 ms report rate over 2.4 G. Click-to-photon under 4 ms — indistinguishable from cable in blind A/B.
- **50-Hour Battery**
Full work week of evening sessions. Type-C top-up: 10 min plugged in = 8 hours back in play.
- **6 Programmable Buttons**
Bind weapon swap, PTT, browser back — anything. **On-board memory**: bindings travel between PCs, no driver re-install.

HERO FEATURE

Silent Micro-Switches

Tuned silicone-dampened micros deliver the same crisp tactile response as the loudest competitive reds — at one-quarter the acoustic output. Sub-35 dB click, rated for 50 M cycles. Late-night raids, shared offices, library sessions, sleeping partner next door — finally a wireless gaming mouse for environments that demand quiet.

SIGNATURE DETAIL

Acoustic-Tuned Click · 33 dB @ 30 cm · 50 M Lifespan

#DETAIL · Silent Switch Macro

Silicone dampener under each switch absorbs the sharp contact transient — quieter than a mechanical pencil tap. Crisp tactile feel preserved.

SOFTWARE CONTROL

FANTECH Drive — Tune Every Click

Lightweight config app for Windows & macOS. Saves on-board — bindings, DPI stages, lift-off settings travel with the mouse.

#SW-01

DPI Editor

DPI & Polling Editor

5 DPI stages · per-stage RGB indicator · top-button hot-swap · polling rate per mode.

#SW-02

Macro Editor

Macro & Button Mapper

32 macro slots · full 6-button remap · on-board memory — bindings follow the mouse.

PAIN POINTS & SOLUTIONS

- 1

Mechanical clicks at 1 AM wake the whole apartment.
Solution: Silicone-dampened silent micros — sub-35 dB click sound, same crisp feel. Neighbor-, roommate-, and partner-safe.
- 2

Cheap wireless gaming mice die after 8 hours and need overnight charging.
Solution: 50-hour cell + Type-C fast charge. 10 minutes plugged in = 8 hours back in play. Never miss a session waiting for charge.
- 3

Bluetooth mice feel sluggish vs wired in competitive games.
Solution: 2.4 G dongle at 1000 Hz polling. Click-to-photon under 4 ms — blind A/B against wired comes up tied.
- 4

Switching one mouse between work laptop and gaming PC means re-pairing every time.
Solution: Dual-mode (BT 5.0 + 2.4 G), one-button switch. PC on dongle, laptop on BT — flip in 1 second.
- 5

Programmable buttons require driver install on every new computer.
Solution: On-board memory stores all macros + DPI profiles. Plug into any USB, every binding comes with you.
- 6

¥99 wireless mice ship with cheap sensors that skip on glass desks.
Solution: 12 K DPI optical sensor, zero lift-off acceleration, tracks cleanly on glass / cloth / hard pads. Same sensor tier as most ¥200+ mice.
